

Day-8

DATE:14-08-25

NAME: NANCY M

Using python flask ,create view page,in the view retrieve the list of users from SQL

Display in the table form

[HelloWorld.py](#):

```
from flask import
Flask,jsonify,render_template,redirect,request,url_for,abort
import sqlite3
app=Flask(__name__)

# @app.route('/')
# def my_index():
#     return 'hello Welcome to home page'
# @app.route('/my_json')
# def ret_json():
#     data={"name":"Alice","age":30,"city":"new York"}
#     return jsonify(data)
# @app.route('/my_html/<nam>')
# def ret_html(nam):
#     return render_template('my_web_page.html',my_name=nam)
# @app.route('/result')
# def result():
#     dict={'phy':50,'che':70,'maths':90}
#     return render_template('my_results.html',result=dict)
# if __name__ == '__main__':
#     app.run(debug=True)

@app.route('/retry/<name>')
def retry(name):
    return 'Sorry %s try again' % name
    # return 'welcome %s' % name
@app.route('/success/<name>')
def success(name):
    return 'welcome %s' % name
```

```

@app.route('/users')
def users():
    print("Userdisplay route called")
    with sqlite3.connect("users.db") as con:
        cur = con.cursor()
        cur.execute("SELECT name, role FROM users")
        rows = cur.fetchall()
        return render_template("usersdisplay.html", users=rows)

@app.route('/login', methods=['POST', 'GET'])
def login():
    if request.method == 'POST':
        user = request.form['nm']
        pwd = request.form['pwd']
        if (pwd == 'nancy'):
            with sqlite3.connect("users.db") as con:
                cur = con.cursor()
                cur.execute("Insert into
users (name,role) values (?,?)", (user, 'developer'))
                con.commit()
            return redirect(url_for('success', name=user))
        else:
            # return redirect(url_for('retry', name=user))
            abort(401)

if __name__ == '__main__':
    app.run(debug=True)

```

Login.html:

```

<!doctype html>
<html>
    <head>

    </head>
    <body>

```

```

    <form action="http://localhost:5000/login" method="post">
      <p>Enter Name:</p>
      <p><input type="text" name="nm" placeholder="enter a name"/></p>
      <p><input type="password" name="pwd" placeholder="enter a
password"/></p>
      <p><input type="submit" name="submit"/></p>
    </form>
    <br>
    <form action="http://localhost:5000/users" method="get">
      <button type="submit">View All Users</button>
    </form>
  </body>
</html>

```

Usersdisplay.html:

```

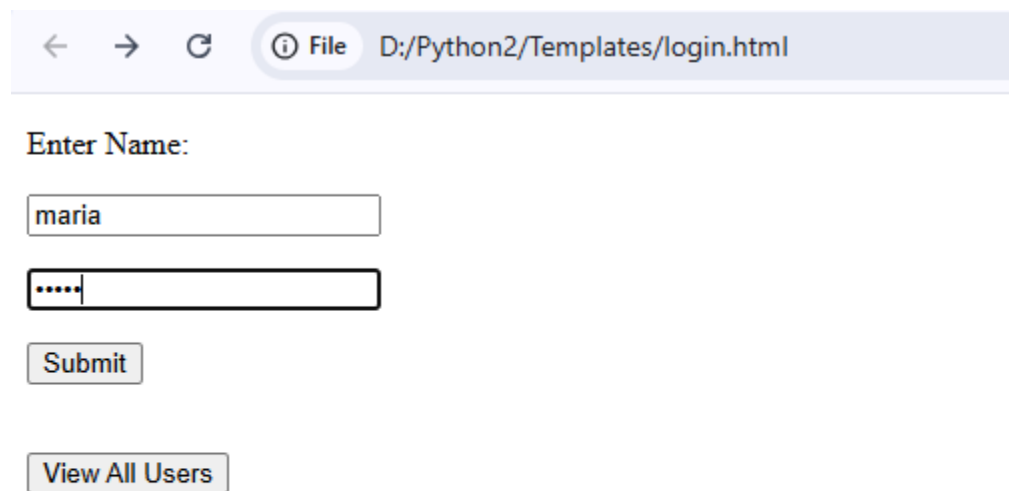

<!doctype html>
<html>
  <head>
    <title>All Users</title>
  </head>
  <body>
    <h1>Registered Users</h1>
    <table border="1" cellpadding="5">
      <tr>
        <th>Name</th>
        <th>Role</th>
      </tr>
      {% for user in users %}
      <tr>
        <td>{{ user[0] }}</td>
        <td>{{ user[1] }}</td>
      </tr>
      {% endfor %}
    </table>
  </body>
</html>

```

my_web_page:

```
<!DOCTYPE html>
<html>
  <head>

  </head>
  <body>
    <h1>
      welcome {{my_name}}
    </h1>
  </body>
</html>
```

A screenshot of a web browser window. The address bar shows the file path "D:/Python2/Templates/login.html". The page content includes a label "Enter Name:", a text input field containing "maria", a password input field with masked characters ".....", a "Submit" button, and a "View All Users" button.

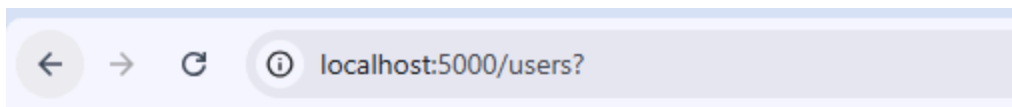

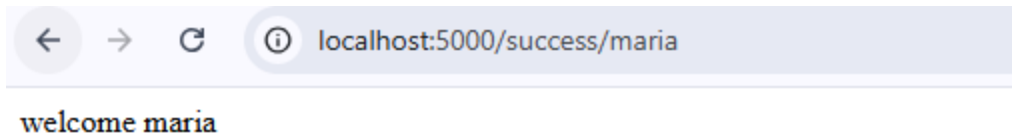

Enter Name:

maria

.....

Submit

View All Users

Registered Users

Name	Role
nancy	developer
jency	developer
maria	developer
